

# New Cancer Center Development

## Keeping Patients Close to Home

### Trust an expert to help you improve access to cancer care for your community

Through our joint ventures, we have built our own centers from the ground up. Now let us use our expertise to help you open or expand your center. We have revolutionized the building process; with our streamlined methods and advanced communication tools, we were even able to go from groundbreaking to first patient at our center in Juneau, Alaska and more recently in Pendleton, Oregon in six months!

### Our knowledgeable project team can manage all aspects from concept, to design, to construction

Whether you need business plan development, financial projections for investment with experienced cost estimates, help with physician procurement, or complete turnkey services, we have the right solution to help you build or expand your oncology program.

### What our clients say:

“RBS has helped make our dream to expand radiation oncology services a reality. Their expertise helped make a complex initiative easier. Their kind and collaborative approach made a stressful endeavor enjoyable! We are grateful to the team members of RBS.”

– Chris Ann Meaney, SVP  
Chief Operating Officer/President of the Bristol Hospital Multispecialty Group
